

ASSIGNMENT NO.6: Data Manipulation and Table Management

Questions:

Q1) Create a MySQL database named CollegeDB and create two tables: Course and Student.

Course Table:

Column name	Data type	constraint
CourseID	INT	PRIMARY KEY
CourseName	VARCHAR(50)	NOT NULL
Fees	DECIMAL(10,2)	NOT NULL

Student Table:

Student Table	Data Type	Constraint
StudentID	INT	PRIMARY KEY
StudentName	VARCHAR(50)	NOT NULL
Age	INT	
City	VARCHAR(30)	
CourseID	INT	FOREIGN KEY

→ Query

USE CollegeDB;

CREATE TABLE Course (

CourseID INT PRIMARY KEY,

CourseName VARCHAR(50) NOT NULL,

Fees DECIMAL(10,2) NOT NULL

);

CREATE TABLE Student (

StudentID INT PRIMARY KEY,

StudentName VARCHAR(50) NOT NULL,

Age INT,

City VARCHAR(30),

CourseID INT,

FOREIGN KEY (CourseID) REFERENCES Course(CourseID)

);

Q2) Insert at least 4 records into the Course table and 6 records into the Student table.

Make sure every student has a valid CourseID from the Course table

→ Query

INSERT INTO Course

(CourseID, CourseName, Fees)

VALUES

(101, 'BSc IT', 45000.00),

(102, 'BCA', 40000.00),

(103, 'BSc CS', 42000.00),

(104, 'Data Science', 55000.00);

→ Query

INSERT INTO Student

(StudentID, StudentName, Age, City, CourseID)

VALUES

(1, 'Rahul Sharma', 20, 'Mumbai', 101),

(2, 'Priya Patil', 19, 'Pune', 102),

(3, 'Aman Verma', 21, 'Nashik', 103),

(4, 'Sneha Joshi', 20, 'Mumbai', 101),

(5, 'Karan Mehta', 22, 'Thane', 102),

(6, 'Neha Shah', 19, 'Pune', 104);

Q3) Write a MySQL query to insert one new student record into the Student table. The record should include:

Field
StudentID
StudentName
Age
City
CourseID

→ **Query**

INSERT INTO Student

(StudentID, StudentName, Age, City, CourseID)

VALUES

(7, 'Arjun Mehta', 21, 'Pune', 104);

SELECT * FROM Student

WHERE StudentID = 7;

Q4) Write a MySQL query to update the city of a student using StudentID. Example requirement:

Change Required

Update the city of
StudentID 2 to Mumbai

→ Query

UPDATE Student

SET City = 'Mumbai'

WHERE StudentID = 2;

SELECT * FROM Student

WHERE StudentID = 2;

Q5) Write a MySQL query to update the fees of a course using CourseID.

Example requirement:

Change Required
Update the fees of CourseID 101 to 47000

→ **Query**

UPDATE Course

SET Fees = 47000.00

WHERE CourseID = 101;

SELECT * FROM Course

WHERE CourseID = 101;

Q6) Write a MySQL query to delete one student record using StudentID. Also write one line explaining why the WHERE clause is important while using DELETE.

→ Query

DELETE FROM Student

WHERE StudentID = 6;

SELECT * FROM Student

WHERE StudentID = 6;

→The WHERE clause is important because it ensures that only the specified student record is deleted. Without the WHERE clause, all records in the Student table could be deleted.
